Economic Modelling

Index to Volume 10
January, April, July, October 1993

Articles – titles

A disequilibrium econometric model of the French economy with two sectors and endogenous prices and investment. *Patrick Artus, Sanvi Avouyi-Dovi and Jean-Pierre Laffargue*. 10.1, 2–10

A two-sector model of a closed static economy with labour market. *A. H. J. Kolnaar and A. M. van Nunen*. 10.3, 201–216

A unified approach to the deviation of influential data diagnostics. *Larry W. Taylor*. 10.2, 113–126

A quarterly model of the US economy during and after World War I. *James L. Butkiewicz and William P. Yohe*. 10.1, 22–34

An expenditure determined macroeconometric model of Greece. *Christos N. Sakellariou and D. Juliet Howland*. 10.1, 35–56

Analysis and simulation of a small econometric model of the Italian economy with rational expectations. *Bruno Chiarini*. 10.4, 348–398

Backward solving quarterly models with seasonal or annual shocks. *Steven P. Cassou*. 10.2, 90–95

Crowding out of private and public accumulation in an international context. *Theo van de Klundert*. 10.3, 273–284

Demand rationing and capital constraints in the Spanish economy: 1964–88. *F. C. Ballabriga, C. Molinas, M. Sebastián and A. Zabalza*. 10.2, 96–112

Distinguishing characteristics of the Martinique economy and constraints on modelling. *Fred Celimene*. 10.4, 322–338

Does public capital affect private sector performance? An analysis of the Spanish case, 1964–88. *Oscar Bajo-Rubio and Simón Sosvilla-Rivero*. 10.3, 179–185

Goods markets integration and fiscal policy: a two-country two-sector analysis. *R. J. de Groof and M. A. van Tuijl*. 10.2, 150–162

International migration, economic policy and human capital accumulation. *Hendrik P. van Dalen*. 10.4, 417–429

Labour market, income formation and social security in the microsimulation model NEDYMAS. *J. H. M. Nelissen*. 10.3, 225–272

Modelling supply in an open economy using a restricted cost function. *John Bradley, John Fitz Gerald and Ide Kearney*. 10.1, 11–21

Models of production and inventory behaviour. *Moheb A. Ghali*. 10.1, 57–63

Monetarization of the budget constraint: two-country model for the European Economic Community and the semi-industrial country blocks. *Şaziye Gasioğlu*. 10.2, 163–172

Multiple equilibria and hysteresis in simple exchange models. *John Creedy and Vance Martin*. 10.4, 339–347

On the demand for information. *Jean-Paul Chavas*. 10.4, 398–407

Policy shocks and the Canadian macroeconomy: a Bayesian vector autoregression approach. *M. Aynul Hasan*. 10.1, 81–88

Production factor substitution and employment by age groups. *G. E. Hebbink*. 10.3, 217–224

Quarterly model of the Polish economy in transition (with special emphasis on financial flows). *Grażyna Juszczak, Maria Magdalena Kaźmierska, Nina Lapinska-Sobczak and Wladislaw Welfe*. 10.2, 127–149

Rational expectation variables in macroeconomic models: empirical evidence for the Netherlands and other countries. *J. A. Bikker, P. J. A. van Els and M. E. Hemerijck*. 10.3, 301–314

Taxation in an intertemporal general equilibrium model of a small, open economy. *D. P. Broer and E. W. M. T. Westerhout*. 10.1, 64–80

Taxation and economic growth: some calculations with a Macro-economic Semi-Equilibrium Model for the Dutch economy. *Jarig van Sinderen*. 10.3, 285–300

The current period coefficient of polynomial lag distributions. *Arie ten Cate*. 10.4, 408–416

Time series evidence on the money supply process in the USA: a new state space modelling approach. *Lorenzo Pecchi*. 10.3, 187–200
